The Azura-Edo case

The Azura-Edo case

The Azura-Edo project has done quite well so far in avoiding accidents on site. In the 10 years of the project being built and operating, it has not had any loss of life during the construction phase or at the operational stage. It is now my job as the CMO to keep the project running smoothly and to ensure that the lessons we have learned are put into practice in the future.

We have made excellent progress on our internal systems and procedures to improve safety, starting with the re-training of all drivers in defensive driving.

We have made excellent progress on our internal systems and procedures to improve safety, starting with the re-training of all drivers in defensive driving. As the team at Azura-Edo Power have shown, the four opportunities to address shortcomings, including making changes to administrative procedures have been implemented to improve driving performance has included improving the audit and governance aspects of the process, installing speed limiting devices in all vehicles and implementing a system to monitor and enforce speed limits, not exceeding speed limits and not using your phone and do not drink and drive.
